

# Quality Management Systems Standard for the Built Environment: BS 99001

## What is BS 99001?

This standard builds on the BS EN ISO 9001 to make it specific to the built environment sector with construction-focused requirements. It embeds safety, competence, and information control into everyday project delivery, helping organisations move from reactive compliance to proactive assurance.

## How will BS 99001 benefit your company?

- It will create audit-ready evidence for the Building Safety Regulator if working on high-risk buildings
- It will improve readiness for higher-risk building gateways 2 and 3, through clear operational and documentary discipline
- It will reduce the risk of delays, rework and regulatory intervention
- It will support a proactive quality culture rather than reactive problem-solving
- It will enhance the company's reputation and competitive advantage

SCCS is the UKAS Accredited Certification Body (0021) specifically for companies engaged in design, manufacture and installation of building materials and associated products and services. The objective of the Scheme is to secure high standards of excellence and quality across all processes, procedures, and practices through independent certification to specific standards. The technical knowledge, practical skills and sector experience the team and auditors bring, makes SCCS the go to certification and auditing providers in the construction industry.
