

Quality Management in Highway Works involving the execution of steelwork: NHSS 20

What is NHSS 20?

NHSS 20 – Particular requirements for the application of ISO 9001:2015 for the execution of steelwork in transportation infrastructure assets. This standard, which was introduced by Highways England, defines the additional requirements for a company's QMS (Quality Management System), to show competency in the production of steel work for transportation infrastructure assets such as bridges.

How will NHSS 20 benefit your company?

- Demonstrates compliance with transportation infrastructure specification
- Provides evidence of relevant quality management giving competitive advantage
- Increased access to new customers and business opportunities
- Reduces costs for both you and your client

The levels of knowledge and service from the SCCS team were invaluable to us. From the opening conversation to the NHSS 20 certification being awarded, nothing seemed too much trouble. We look forward to continuing to work closely with them.

Hollygate Fabrications Ltd, SCCS Client

SCCS is the UKAS Accredited Certification Body (0021) specifically for companies engaged in design, manufacture and installation of building materials and associated products and services. The objective of the Scheme is to secure high standards of excellence and quality across all processes, procedures, and practices through independent certification to specific standards. The technical knowledge, practical skills and sector experience the team and auditors bring, makes SCCS the go to certification and auditing providers in the construction industry.
